FORMAT

The bibliography is divided into two sections:-

(1). Reference Index

Each of these references contains information on the limnology and fisheries of Canadian freshwaters. They are numbered and appear in numerical order. This enumeration is consecutive and continuous through the bibliography series.

(2). Freshwater Feature Index

This section is divided into alphabetical order of provinces and within each province the freshwater feature names are in alphabetical order. The coordinates (in minutes and degrees, latitude and longitude) are given for each feature except for British Columbia where, for the most part, the quadrilateral indexing system is used.

Apart from French names, it is usual for the specific name to precede the generic name, as in Elliot Lake, but in a few cases the reverse is true, such as Lake Nipissing, in which case the latter will appear as Nipissing, Lake, with a comma after the specific name. The words Saint and Sainte are abbreviated to St. and Ste. respectively but appear in the sequence as if they were spelled in full.

Approved Names - these are always printed in upper case. As well as those given in the Gazetteers and their Supplements, these names also include some which have been only recently approved and it is unlikely, therefore, that for the present at least these new names will be found on the topographical maps.

Previous Names - these are always printed in lower case. As well as appearing in alphabetical order with the approved names they can also be found below and to the right of the relevant approved names. Misspelled names as found in the literature also come under this category.

Temporary names - these are given by investigators to those freshwater features which are unnamed. Where their geographical coordinates are known, they appear in the bibliographies in upper case and preceded by an asterisk(*). In some cases, more accurate positioning than latitude and longitude is available from the compiler. When these features are allocated an approved name, which need not be the same as the temporary name, by the Canadian Permanent Committee on Geographic Names, both names will be added to the Freshwater Feature Index.

The numbers in brackets following the geographical coordinates refer to the numbered references in the Reference Index.

NOTICE TO AUTHORS

The most time-consuming work involved in the preparation of these bibliographies is the identification of those freshwater features which are inadequately described in the literature. A great deal of published data cannot be included in this series because the features referred to cannot be identified. Authors are therefore urged to include the geographical coordinates as given in the Gazetteers or their Supplements when referring to Canadian freshwater features in their publications.
